Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3,6-22, 56-59 and 62-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller, Muszak et al. or Carey et al. in view of Hamilton et al. (USP 4,568,519)

See the appropriate paragraph of the 10/05/05 Office action.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3,6-22, 56-59 and 62-71 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jakubowicz et al. (USP 5,244,633).

Jakubowicz et al. teach an incubator using two independently driven concentric rings that have been read on the claimed "inner" and "outer" rings. The original specification of the instant application teaches of page 7 lines 8+ "... the term "element" ... referes to ... any form of sample container". The claimed "slide elements" have been read on the taught –cuvettes--. Claim 1 stated the two rings are in a common plane, independently rotated and that sample cuvettes are moved between the rings without coming out of the common horizontal plane.

Response to Arguments

Application/Control Number: 09/904,692

Art Unit: 1743

`s'

Applicant's arguments filed 2/6/06 have been fully considered but they are not persuasive.

Applicants' Miller and Muzak et al. fail to teach concentric inner and outer ring rotors that remain in a common horizontal plane during all stages of the of operation. The instant claim language does not require the rotors to be in the same plane during all stages of operation. Applicants' may considered additional amendments specifying the rotors are "always', "only" or "exclusively" in a common horizontal plane.

Applicants' state Miller and Muzak et al. do not teach movement of the slide "exclusively along a common horizontal plane". These two references were cited in combination with Hamilton et al. to teach this feature.

Applicants' state Carey et al. and Jakubowicz et al. are not relevant because they are directed to movement of "cuvettes" rather than "slide elements". The original specification of the instant application teaches of page 7 lines 8+ "... the term "element" ... refers to ... any form of sample container". The claimed "slide elements" have been properly read on the cuvettes taught by Carey et al. and Jakubowicz et al. Applicants' may consider better defining the claimed "slide elements" to define over these references.

Applicants' state Jakubowicz et al. fail to teach loading of the cuvettes into the inner ring. The pending limitations do not exclude the movement of a sample from the outer ring to the inner ring which read on the instant claims. The pending claims do not specify loading of the inner ring from somewhere other than the outer ring. Rather, the

Art Unit: 1743

claims are directed to relative movement between the rings which is met by Jakubowicz et al.

Applicants' state Jakubowicz et al. fails to teach the at least one second drive mechanism including at least one reciprocating pusher blade assembly for loading slide elements into said inner ring and for moving slide elements between said inner ring and said outer ring. This language does not distinguish over the relative movement taught by Jakubowicz et al.

Applicants' state claims 62-63 have been specifically amended describing the pusher blade assembly enabling radial movement either into and/or out of the incubator, as well as radial movement between the inner and out rings. It appears the instant claims are directed to the relative movement between the inner and out rings.

Applicants' may consider further amendments to better describe the movements of slides into or out of the incubator.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lyle A. Alexander whose telephone number is 571-272-1254. The examiner can normally be reached on Monday, Wednesday and Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
